THE VERSATILE LIGHTWEIGHT HARNESS

RE-INTRODUCING THE YETI CONVERTIBLE

The Yeti Convertible 2 is a lightweight reversible harness with split legs. It is ideal for hike 'n fly, travel, and soaring. The harness features new advancements in lightweight materials combined with a geometry carefully optimized for maximum comfort and usability.

Extra comfort on the ground and in the air

The Yeti Convertible 2 features a redesigned rucksack, which offers an improved load distribution — around 30/70 between shoulders and waist. Comfort features have also been added to the harness, yet the weight remains a compact 1.8kg.

Part of the Yeti lightweight system

The Yeti Convertible 2 is part of a versatile system that covers all your lightweight needs. For greater protection, simply add the optional airbag with rescue compartment. Finally, add a Yeti paraglider and you're good to go!

IMPROVED AIRBAG

The new airbag has been designed with an integrated rescue compartment that can be used with all GIN lightweight rescues. The front air intake improves inflation and the internal structure of the airbag helps to reduce impact forces and maximise efficiency. The new titanium wire structure improves pre-inflation and is resistant to bending or retaining improper shape, making packing easier and flying safer.

detachable airbag with integrated rescue container

DETAILS (HARNESS):

- split legs geometry
- lateral strap adjustment
- shoulder attachment points and tunnel for rescue bridle
- adjustable volume of back pocket
- lateral straps to adjust seat angle
- manual buckles on chest and leg straps
- 12mm kevlar / 25mm dyneema webbing
- certified EN 1651
- detachable airbag (500g)

DETAILS (RUCKSACK):

- mesh side pocket
- ergonomic back support
- mesh material on shoulder straps and hip belt for breathability
- external side compression straps
- attachments for walking poles, crampons, ice axe etc.
- external helmet holder
- chest strap

Weight

1.36kg (M size, without airbag)

Sizes

S, M, L

Rucksack volume

40L
